

A PASSION FOR WIRELESS TECHNOLOGY

All around us, information flows in invisible fields coordinating and synchronising movement and action, both in nature and the man made world. Business has harnessed technology to create its own invisible information spheres that shape the movement and direction of commerce. In the wireless world, channelling this information, controlling it and making it work for you is our primary goal at Nordic ID.

Technology in the service of people

Nordic ID produces handheld devices that combine the cutting edge of technology with standard communication systems to maximise interaction with our customers' business networks in retail, industry, healthcare, warehousing and security.

In this approach, flexibility supported by a focused service mentality yields the best results. At Nordic ID we work closely with our customers right from the start, listening to their needs and building on what is possible, delivering customised and where required, brand-tailored solutions. Our aim is to leverage existing infrastructures while

ensuring interconnectivity with other devices using the latest mobile information technology. The handhelds themselves are designed to be as easy and intuitive to operate as possible thus ensuring a comfortable user experience and a fast track to productivity.

DESIGNED FOR YOUR WORLD

The future works

Whether your business runs on ubiquitous technologies such as barcodes or you are still considering new alternatives, Nordic ID Morpheic is a smart hardware investment. We at Nordic ID acknowledge your technology concerns and have created a handheld that integrates neatly into your present system and is upgradeable to, for example, RFID with little further investment. Not only that, Nordic ID Morpheic's remote management system means that software upgrades to units in the field are performed centrally thus minimising downtime and freeing up valuable IT resources for better use elsewhere. Indeed, smooth

integration with software and hardware at the client interface is our goal ensuring a good future proof fit whatever the application environment.

A software emulator enables use with existing Nordic ID RF-series integrations with no further software work needed. If you are already using RF-series handhelds and have a WLAN network or are considering it, Nordic ID Morpheic is the natural next step offering instant compatibility with the possibility to expand with other Windows applications.

Shaped to fit

Nordic ID Morpheic is first and foremost a working tool so we've designed it to be small enough to fit comfortably in the hand with easy-to-use ergonomic controls and a tough exterior. Your workforce will quickly warm to its well thought out design and intuitive functionality – this is a tool that won't get put down easily or forgotten somewhere on the shop floor because it simply makes work easier.

Fast on the curve

Nordic ID Morpheic follows the same logic as its predecessors in the Nordic ID product range. Its robust no-nonsense exterior incorporates an intuitive user interface with browser for a fast return on information on the shop floor. Even novice users can quickly adapt to its practical operating logic, get on the learning curve and put it to work. Watch productivity increase as your

workforce get access to valuable information that directs effective action. Nordic ID Morpheic also combines data collection with voice communication thus removing the need to carry several devices at the same time. Nordic ID Morpheic is all you need.

NORDIC ID
MORPHIC – IN TUNE
WITH YOUR ENVIRONMENT

Building on this flexible approach, Nordic ID advances future proof design with its most outstanding offering yet, Nordic ID Morphic – a handheld device, which chameleon-like, synchronises with its environment and evolves to fit new technologies as they emerge.

A
SMALL
COMPANY
WITH A
BIG
REPUTATION

Originally a small engineering company, Nordic ID, based in Salo, Finland, has grown to be one of the biggest providers of handheld instruments in Europe. The breakthrough product was the RF500, a handheld data terminal. Compared to competing products, it was lightweight and easy to use with one hand - a feature that soon became the trademark of all Nordic ID's products. Following on the success of the RF500, Nordic ID has introduced several RF-series terminals and the PL-series advanced Windows* based handheld units. Our aim is to create an efficiently operating wireless society to the benefit of people and the environment.

Our passion for using the latest wireless and mobile telecommunications technology in our devices places us as pioneers in the field. For us, size does matter; as a small Finnish hi tech company, we have dedicated ourselves to the spirit of continuous product development in close cooperation with our customers globally. We strive in all instances to meet their most exacting wishes to meet their specialised needs in diverse operating environments.
